

ABSTRAKT

Title of bachelor's thesis

Case Study of physiotherapy treatment of patient with Juvenile Rheumatoid Arthritis

Summary

The goal of my work is to characterize the issue of the juvenile idiopathic arthritis. In the first more theoretical part, I specifically describe the above mentioned disease and make a general distinction among the rheumatic diseases.

The second part elaborates on a special case report of a patient being diagnosed with the juvenile idiopathic arthritis, which I had been working on during the four-week work experience at the Rheumatology Institute in Prague. This section includes the input and output kinesiology analysis, short- and long-term therapeutic plan, design/proposal and description of particular treatment therapies.

Key words: rheumatology, physical therapy, juvenile rheumatoid arthritis, case report
